# Sean W. Seder, Ed.D.

AI Integration Lead, Beaufort County School District | SC AI Pilot Representative | AI Enablement and Adoption Leader
Okatie, SC (Remote, US) | (330) 465-5267 | sean32386@gmail.com | linkedin.com/in/sean-seder-4b7b10126 | caddiejr.com

## Summary

AI Enablement and Adoption Leader with real technical fluency in LLMs, local models, RAG, and applied AI systems. 17 years in schools, 12+ years of program leadership, and 3+ years leading district AI implementation. I teach people to solve their own problems with AI workflows, build the approach to measure adoption and impact, and work as the bridge between IT and executives. That spans training, workflow mapping, prototyping, governance, and the champion network, work often split across separate private-sector jobs, through role-based professional learning, workshops, office hours, and playbooks; prototypes handed off with training; and AI champion and ambassador networks and a center-of-excellence structure that I built and run. Hands-on with Claude Code, GitHub, Python, and TypeScript; fluent in Microsoft 365 Copilot, ChatGPT, Claude, and Grok. BCSD's sole representative among the original 10 statewide AI Leads in the SC Department of Education AI Pilot, working with the SC Department of Education, SREB, and a monthly university network.

## Experience

**AI Integration Lead, Beaufort County School District | SC AI Pilot Representative | Bluffton High School, Bluffton, SC | 08/2023 to Present**

- Lead district-wide AI professional learning for a district of about 3,000 teachers and about 33,000 students; wrote curricula, playbooks, and a role-based video training series, and deliver workshops, role-based training, and office hours on AI tools, risks, and responsible use
- Built and run AI champion and ambassador networks and a center-of-excellence structure so AI capability does not depend on one person; lead through influence without formal reports
- Map department workflows, define the problem, build working prototypes and proofs of concept, and hand them off with training so the host team can sustain the work
- Selected as BCSD's sole representative among the original 10 statewide AI Leads in the South Carolina Department of Education AI Pilot; work with the SC Department of Education, the Southern Regional Education Board (SREB), and a monthly university network (University of Florida, Clemson University, the University of South Carolina, and other SC colleges) on AI governance and adoption methodology in a regulated, student-data environment
- Contributed to a district NotebookLM initiative that reached 5,000+ teachers district-wide
- Lead applied AI implementation projects in agriculture, computer vision, robotics, and sports analytics, from problem definition through working prototypes

**STEM Program Director | Ashland City Schools, Ashland, OH | 2014 to 2023**

- Led a multi-school technology program across strategy, curriculum, vendor evaluation, and procurement; helped plan and procure about $150,000 in program equipment buildout across projects (not an annual operating budget); built robotics, drone, and programming tracks from concept to sustained operation
- Reported program progress to district leadership and the board

**Teacher and Head Coach | Fort Worth ISD, Fort Worth, TX | 2009 to 2014**

## Projects

**EVIE: On-Premise LLM Assistant Prototype | 2025 to Present**

- Local, on-prem LLM assistant prototype that I designed, built, and iterate on, for in-room support with inference kept on the machine. Documented pipeline includes wake word, speech-to-text, a local LLM (Ollama with a custom Qwen 2.5 32B), text-to-speech, and a local retriever. Built with Claude Code and GitHub.

**CaddieJr: AI Golf Coaching Platform (gated beta, market-ready, pre-launch) | caddiejr.com | 2025 to Present**

- AI golf coaching platform in gated beta, market-ready, pre-launch, that I built with Claude Code and GitHub. Uses the Claude API for coaching plans, adaptive skill plans, and session analysis. Stack: Next.js 14, TypeScript, Supabase, Vercel, Claude API.

**FieldSense (in progress):** planned off-grid prototype for plant imaging and LLM plant-health guidance; Presidential AI Challenge entry (2026 to 27).

## Skills

Leadership and enablement: AI implementation, AI adoption, organizational change, professional learning, role-based training, workshops, office hours, workflow mapping, influence without authority, stakeholder leadership, program development, responsible-use governance
Technical: LLMs, generative AI, Claude API, Claude Code, ChatGPT, Grok, Microsoft 365 Copilot, Qwen, Ollama, RAG, agentic workflows, prompt engineering, computer vision, Python, TypeScript, Next.js 14, FastAPI, Supabase, Vercel, Git, GitHub, Raspberry Pi, Arduino

## Education

Ed.D., South College, 2026 | M.S. Ed., Educational Leadership, WGU, 2019 | B.S. Ed., Ohio Univ., 2009 | SC Administrator Certification | Microsoft Azure AI Fundamentals (AI-900)
Doctoral research on practical barriers to AI adoption, professional learning, and applied implementation
